Summary

AWS Certified Cloud Practitioner with over 2.9 years of experience in Java backend development and strong foundation in cloud and DevOps concepts. Skilled in AWS services, Docker, Terraform, and CI/CD pipelines. Passionate about building scalable systems and seeking an entry-level Cloud/DevOps role to apply and grow technical expertise

Experience

JAVA-DevOps Engineer - Integrin Enterprise Solutions Mar 2023 – Nov 2025

Project : *Integrin Drug Enforcement Agency* *Coimbatore*

- Developed and maintained backend modules using Apache OFBiz, Java, and Groovy, implementing business logic and ERP workflows for drug inventory management.
- Built and maintained RESTful APIs and optimized PostgreSQL database operations to support efficient application functionality and data integrity.
- Deployed and maintained Java applications on Apache Tomcat, performing debugging, troubleshooting, and application-level issue resolution.
- Used Git and GitHub for version control, source code management, branching, and collaboration across development activities.
- Containerized Java applications using Docker to ensure consistent application environments and simplify deployment.
- Worked with AWS EC2 for application hosting, Amazon S3 for storage, and Amazon ECR for storing and managing Docker images.
- Configured CI/CD workflows using GitHub Actions to automate application build, Docker image creation, and deployment processes.
- Used Terraform to provision and manage AWS infrastructure using Infrastructure as Code (IaC) practices.

AWS Cloud Developer - IVW Technology Solutions Aug 2026 – Present

Project : *People Management Portal* *Chennai*

- Linux for application environment setup, command-line operations, log inspection, file management, permissions, process management, and basic troubleshooting.
- Docker to containerize the application services and manage application images, containers, networking, and port configurations.
- Docker Compose to configure and run the application services together during local development and testing.
- Amazon ECR to store and manage Docker images used for application deployment.
- Amazon EC2 to deploy and run the containerized application in the AWS environment.
- Terraform to provision and manage AWS infrastructure required for the application, following Infrastructure as Code (IaC) practices.
- Git and GitHub for source code management, branching, version control, and collaboration throughout the project.
- GitHub Actions to automate the CI/CD workflow, including building the application, creating Docker images, pushing images to ECR, and deploying the application to AWS.
- IAM to manage permissions and provide appropriate access to AWS resources used by the application and deployment pipeline.
- RDS to host and manage the application's relational database and establish connectivity between the application and database.
- Route 53 for DNS configuration and routing the application through a domain name.
- ELB to distribute incoming application traffic across the application instances and improve availability.
- AWS Lambda and EventBridge for implementing event-driven automation and scheduled application-related tasks.
- AWS KMS for encryption and secure management of keys used to protect application-related data and AWS resources.

Technical Skills

Languages: Java, Python
Cloud: AWS (EC2, S3, IAM, RDS, ECR, Lambda, Eventbridge, CloudWatch)
DevOps: Git, Docker, Docker Compose, Terraform, Jenkins, Ansible, Kubernetes, Prometheus, Grafana
OS: Linux,Ubuntu
Databases: PostgreSQL, MySQL

Education

Government College Of Engineering(IRTT), Erode Aug 2018 – Apr 2022

BE - Computer Science and Engineering (CGPA - 8)

Training/Certifications

AWS Certified: Cloud Practitioner Issued- Jan 2026

Gained foundational level knowledge of cloud services provided with AWS Cloud.

Certified DevOps - Greens Technology, Chennai June 2026 - Aug 2026

Gained Strong knowledge and hands on experience with DevOps tools provided with AWS Cloud.

AWS Solution Architect Associate Pursuing

Project (Personal)

Student Management API - Devops Project Mar 2026

- Built a Spring Boot REST API to manage student data with CRUD operations and database integration.
- Containerized the application using Docker, ensuring consistent deployment across environments.
- Provisioned cloud infrastructure using Terraform (Infrastructure as Code) on AWS EC2.
- Implemented CI/CD pipeline using GitHub Actions, automating build and deployment processes.
- Deployed the application on AWS EC2, improving accessibility and scalability.
- Integrated version control using Git, ensuring efficient code collaboration and tracking.
- Reduced manual deployment effort and improved release efficiency through automation practices.
- Integrated monitoring using Prometheus and visualized system metrics with Grafana dashboards for performance tracking.
